

Subelliptic PDE-s and Subriemannian Geometry

Peter Greiner

`greiner@math.toronto.edu`

University of Toronto

I shall discuss the connection between complex Hamiltonian mechanics and subriemannian geometry on the Heisenberg group. Using these geometric concepts I shall describe the subelliptic heat-kernel and its small time asymptotics. To extend this work to higher step operators I shall apply some of these concepts to a particular 3-step example.
