

The Impact Of Computer Architecture On Linear Algebra Algorithms

Jack Dongarra
`dongarra@cs.utk.edu`
University of Tennessee, USA

In this talk we will examine some of the changes that have been brought about by modern computer architectures. We will look at the impact of super-scalar RISC processors and the ability of achieving high performance. The talk will focus on three themes: Automatically tuned linear algebra software Recursive algorithms for dense and sparse direct methods Tools for evaluating the performance on modern machines
