

Quixotic quests

Stephen DeBacker
debacker@math.harvard.edu
Harvard University, USA

I will discuss what I and others have been working on since the last p-adic conference in Banff. For example, I will discuss why “the” natural generalization of a result of Kazhdan and Lusztig to the p-adic setting is false, and I will discuss how one might generalize the results of a paper of Schneider and Stuhler to the arbitrary depth situation.
