

Degenerate principal series for even-orthogonal groups

Chris Jantzen

`jantzen@mail.ecu.edu`

East Carolina University, U.S.A.

This talk will discuss degenerate principal series–representations obtained by inducing a one-dimensional representation from a maximal (proper) parabolic subgroup–for the groups $O(2n, F)$ and $SO(2n, F)$, with F a p -adic field of characteristic zero. The talk represents joint work with Dubravka Ban.
