

# Reconstruction of Cardiac Electrical Activity

Eric Voth

Atrial Fibrillation, St. Jude Medical, Inc.

evoth@sjm.com

## **Abstract**

This talk will describe a clinically established system for diagnosing cardiac arrhythmias, based on a high-order boundary element solution of the inverse Cauchy problem for the Laplace equation. Open questions regarding accuracy, optimality, joint regularization in time and space, and developing a clinically relevant automated database for simulation and testing will also be discussed.
