

Heather Clark
Department of Physics, University of Alberta
hclark@phys.ualberta.ca

BSc (Honors Physics), University of Alberta, 2007. Pursuing MSc (Physics), University of Alberta.

I would like to attend this summer school because it will be valuable exposure to topics in fluid dynamics and atmospheric research that are new to me. The summer school will be an excellent learning opportunity for me as a young researcher and student.

My Master's research is on fluid dynamics. Specifically, my thesis topic is the generation of internal gravity waves by an oscillating cylinder in an anelastic fluid.
